

Saturn Studio – Credencial Airtable

Para obtener la **API Key** de Airtable desde el módulo de Saturn Studio, sigue estos pasos:

1. Acceso al módulo Airtable

En Saturn Studio, dirígete al módulo **Airtable** y haz clic en **New** para crear una nueva credencial.

The screenshot shows the Saturn Studio interface for the 'Search Records' module. At the top, there is a red header with the 'Search Records' title and a search icon. To the right of the header are three buttons: a green button with '{ x }', a yellow button with a test command icon and 'Test Command', and a blue button with a question mark icon and 'Docs'. Below the header, there is a section for adding a description, followed by a search bar with a question mark icon and the text 'Search records from an Airtable base'. Below the search bar is a 'Credential' dropdown menu with a question mark icon. The dropdown menu is currently empty, and there are 'Edit' and 'New' buttons to its right. Below the dropdown menu, there is a small text label: 'Select the Airtable credential you want to use'.

2. Ingresar el nombre

Al hacer clic en **New**, se te pedirá que ingreses un **nombre** descriptivo para la credencial.

You have no personal access tokens

Personal access tokens grant permission to read and write data via the [Airtable API](#).

Create token

6. Configurar el token

Configura el token con los siguientes detalles:

- **Nombre:** Asigna un nombre descriptivo al token, por ejemplo, "test".
- **Scopes:** Selecciona los permisos que deseas otorgar al token. Ejemplos de permisos:
 - **data.records:read** (para leer registros)
 - **data.recordComments:read** (para ver comentarios en los registros)
- **Acceso:** Elige el nivel de acceso que deseas otorgar, ya sea para una base, múltiples bases o todas las bases de tus workspaces.

Personal access token / Create personal access token

Personal access tokens are required to use the [Airtable API](#).

This token will grant access to the data in the selected workspaces and bases. This token will also allow usage of other, non-workspace/base API endpoints. Only use this token for your own development. Don't share it with third-party services and applications.

Name

The token's name will be visible in record revision history.

Scopes [?](#)

With this token, you will be able to:

- `data.records:read` ×
See the data in records
- `data.recordComments:read` ×
See comments in records

[+ Add a scope](#)

Access [?](#)

This token can access the following bases and workspaces. You can only grant access to bases and workspaces that you have access to.

- ALL RESOURCES ×
 All current and future bases in all current and future workspaces

[+ Add a base](#)

Cancel

Create token

7. Finalizar la creación

Haz clic en **Create token** para generar el token.

8. Copiar el token

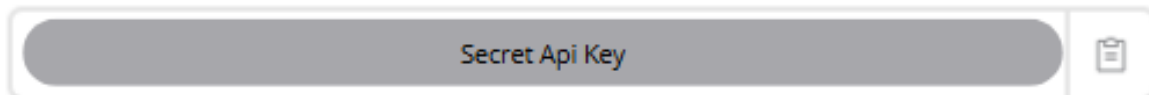

Una vez generado el token, se mostrará solo una vez. **Cópialo y guárdalo en un lugar seguro**, ya que no podrás verlo nuevamente.

Your token has been created

This token will only be shown once. Copy it now and store it in a safe, secure location.

Only use this token for your own development. Don't share it with third-party services and applications.

Done

9. Ingresar la API Key en Saturn Studio

Vuelve a Saturn Studio y pega el **token** en el campo correspondiente en el módulo **Airtable**. Luego, verifica el token con el botón a un costado. Si todo está correcto, habrás creado correctamente una credencial para Airtable.
